VALUATION APPROACH

The Proposed Amalgamation contemplates the Amalgamation pursuant to a Scheme of Arrangement. Arriving at the fair equity share exchange ratio for the Proposed Amalgamation of MALCO with ARFIN would require determining the fair values of each company. These values are to be determined independently but on a relative basis, and without considering the effect of the Proposed Amalgamation.

As per SEBI Circular CFD/DIL3/CIR/2017/21 dated March 10, 2017, The issuance of shares under schemes in case of allotment of shares only to a select group of shareholders or shareholders of unlisted companies pursuant to such schemes shall follow the pricing provisions of Chapter VII of the SEBI (Issue of Capital and Disclosure Requirements) Regulations, 2009 (hereinafter referred to as "the ICDR Regulations").

As per Regulation 71A of ICDR Regulations, frequently traded shares means shares in which the traded turnover on any stock exchange during the twelve calendar months preceding the relevant date, is at least ten per cent of the total number of shares of such class of shares of the issuer the shares. In case of ARFIN, traded turnover on the recognised stock exchange during last twelve calendar months is greater than ten per cent of the total number of shares of the company. Hence, shares of the company are frequently traded.

Accordingly, valuation of shares of Arfin India Limited will be in compliance with the pricing formula provided in Regulation 76 of ICDR Regulations, which is reproduced hereunder:

If the equity shares of the issuer have been listed on a recognised stock exchange for a period of twenty six weeks or more as on the relevant date, the equity shares shall be allotted at a price not less than higher of the following:

- a) *The average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognised stock exchange during the twenty six weeks preceding the relevant date; or*
- b) *The average of the weekly high and low of the volume weighted average prices of the related equity shares quoted on a recognised stock exchange during the two weeks preceding the relevant date (Regulation 76)*

There are several methods of valuation, which are recognized as sound methods for arriving at the fair market value of the equity shares of the Companies. It is beyond doubt that no single method can be competently used in all situations.

Several factors will have to be factored in before one arrives at the decision of using one or more methods of valuation. Some indicative illustrations are as under:

1. The nature of the business and the history of the enterprise from its inception.
2. History of asset creation and change in its market value as compared to book value.
3. Intangible assets either on or off the Balance Sheet.
4. Objective for which the valuation is carried out.
5. Comparison of profitability of the company inter-se and with industry average.

VALUATION OF EQUITY SHARES UNDER DIFFERENT APPROACHES

■ COST APPROACH

The asset based valuation technique is based on the value of the underlying net assets of the business, either on a book value basis or realizable value basis or replacement cost basis. The Cost Approach ignores the future return the assets can produce and is calculated using historical accounting data that does not reflect how much the business is worth to someone who may buy or invest in the business as a going concern.

This valuation approach is mainly used in case where the firm is to be liquidated i.e. it does not meet the "going concern" criteria or in case where the assets base dominate earnings capability. The operating assets have therefore been considered at their book values.

Net Assets is the excess of all assets of company over its liabilities to outsiders as shown in the Balance Sheet.

▪ **INCOME APPROACH**

A. PROFIT EARNING CAPACITY VALUE METHOD

Under this method, the average of profits after tax of the past years is capitalized at an appropriate rate to arrive at value of shares. The crux of estimating the profit-earning capacity value lies in the assessment of the future maintainable earnings of the business. While the past trends in profits and profitability would serve as a guide, it is not to be overlooked that the purpose of valuation is to arrive at the future post tax maintainable stream of earnings. All relevant factors that have a bearing on the future maintainable earnings of the business must, therefore, be given due consideration.

Method of computation of average profits:

Ordinarily, the averaging of profits will be worked out for the past three accounting years for which audited accounts are available. But in appropriate cases, e.g., where the capital base of the company or the profits show erratic variation or where the premium involved is substantial or the industry concerned is subject to cyclical trends a weighted average of the profits after tax will be considered.

If the year-to-year variation in the profits of the last three years is considered to be normal, the average may be calculated on the basis of a simple arithmetical average. But if the profits are rising consistently from year to year at a steady ratio and there are reasons to believe that the rising trend will be maintained into the future, the average may be calculated on a weighted basis giving a weightage of 3 for the latest year, 2 for the middle year and 1 for the farthest year. Conversely, if the profits are declining consistently from year to year, it would be advisable to consider the profits of only the latest year since any average-simple or weighted- will result in a higher figure than the profits of the latest year which is inconsistent with the situation of consistently declining profits. Here also, it would be prudent to look into the accounts of the last 5 years to make a judgment on the trend in profits.

Capitalization Rate:

The erstwhile CCI Guidelines prescribed capitalization rates for different class of companies. The guidelines categorized the capitalization rate under three broad categories viz. Manufacturing Companies, Trading Companies and Intermediate Companies. The rates prescribed were:

1. 15% in the case of manufacturing companies / service providers
2. 20% in the case of trading companies and
3. 17 ½% in the case of "intermediate companies", that is to say, companies whose turnover from trading activity is more than 40%, but less than 60% of their total turnover.

B. DISCOUNTED CASH FLOWS (DCF) METHOD

Under this method, the value of equity share of the Company is arrived at by analyzing the historical trends and the future financial projections of the Company. This method takes into account the future potential earnings of the Company and profitability of the Company. It discounts the future earning potential of the Company and arrives at the possible market price of the Company on the present day.

The Discounted Free Cash Flow Method is one of the most rigorous approaches to valuation of business. In this method, the projected free cash flows from business operations are discounted at the weighted average cost of capital and sum of such discounted free cash flows is the value of the business.

Use of Discounted Free Cash Flows method involves determining the following:

- Estimated future cash flows
- Number of years cash flows used in the study
- Appropriate Discount Rate to be applied to cash flows
- The continuing value i.e. the cumulative value of the free cash flows beyond the explicit forecast period.
- Value of Debt, if any.

The value of the firm is obtained by discounting expected cash flows to the firm, i.e., the residual cash flows after meeting all operating expenses, reinvestment needs and taxes, but prior to any payments to either debt or equity holders, at the weighted average cost of capital, which is the cost of the different components of financing used by the firm, weighted by their market value proportions.

$$\text{Value of Firm} = \sum_{t=1}^{t=n} \frac{\text{CF to Firm}_t}{(1+WACC)^t}$$

Where,

CF to Firm= Expected Cash flow to Firm in period t

WACC = Weighted Average Cost of Capital

The weighted average cost of capital is the discount factor used to arrive at the value of the firm. Discounting free cash flow to the firm at the cost of capital will yield the value of operating assets of the firm. To arrive at the firm value, the value of non-operating assets will also have to be added. Non-operating assets include cash, marketable securities and holdings in other companies.

Terminal value is the present value at a future point in time of all future cash flows when we expect stable growth rate forever. To arrive at the terminal value, the Perpetuity Growth Model is used which accounts for the value of free cash flows that continue into perpetuity in the future, growing at an assumed constant rate. Here, the projected free cash flow in the first year beyond the projection horizon (N+1) is used. This value is divided by the discount rate minus the assumed perpetuity growth rate. $T_0 = FCF_{N+1} / (k - g)$. T_0 is the value of future cash flows at a future point in time which is immediately prior to N+1, or at the end of period N, which is the final year in the projection period, k being the discount rate and g being the perpetual growth rate. This equation is a perpetuity, which uses a geometric series to determine the value of a series of growing future cash flows.

■ MARKET APPROACH

Under Market approach, the valuation is based on the market value of the company in case of listed companies. The Market approach generally reflects the investors' perception about the true worth of the company.

MARKET PRICE METHOD

This method evaluates the value on the basis of prices quoted on the stock exchange(s). Average of quoted price is considered as indicative of the value perception of the company by investors operating under free market conditions. The average of such Market Prices could be taken on a simple or weighted average basis taking into consideration the value and the volumes of the transactions taken place on the stock exchange.

This method is important for the Valuer as the secondary Equity Market is not only a reflection of the fair value of the Company, but also of the other market information to know the perception of the market prevailing during the span of time for which the price of the share is evaluated.

Under this method of valuation, calculation is done based on the average of weekly high lows of volume weighted market price of shares of a company for a period of 26 weeks from the date for which the valuation is to be arrived at.

In compliance of SEBI Circular CFD/DIL3/CIR/2017/21 dated March 10, 2017 and on the basis of pricing formula prescribed under Regulation 76 of ICDR Regulations, the volume –weighted average market price, the value per share of the company shall be higher of the following:

- i) *The average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognised stock exchange during the twenty six weeks preceding the relevant date; or*
- ii) *The average of the weekly high and low of the volume weighted average prices of the related equity shares quoted on a recognised stock exchange during the two weeks preceding the relevant date.*

Accordingly, value per share of Arfin India Limited is **Rs.496.95**. (Source: Market prices of last 26 weeks from May 20, 2017 taken from the website of BSE Limited i.e. www.bseindia.com)

▪ **BASIS OF FAIR EQUITY SHARE EXCHANGE RATIO**

The fair exchange ratio of equity shares has been arrived at on the basis of a fair equity valuation of the companies and is based on the various methodologies explained herein earlier and various qualitative factors relevant to each company and the business dynamics and growth potentials of the businesses of the Companies, having regard to information base, key underlying assumptions and limitations.

Though different values have been arrived at under each of the above methodologies, for the purpose of recommending a fair exchange ratio of equity shares, it is necessary to arrive at a single value for the shares. It is however important to note that in doing so, we are not attempting to arrive at the absolute equity values of the Companies but at their relative values to facilitate the determination of a fair equity share exchange ratio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each methodology. We have given weights to the values arrived at under different methodologies, based on the evaluation and judgement of the business of the companies, in order to arrive at the relative values of the equity shares.

CONCLUSION

In light of the above, and on a consideration of all the relevant factors and circumstances as discussed and outlined herein above, we recommend the following fair equity share exchange ratio of equity shares for the Proposed Amalgamation:

"31 (Thirty One) equity share of ARFIN of Rs.10/- each fully paid up for every 100 (Hundred) equity shares of MALCO of Rs. 10/- each fully paid up."

LIMITED REVIEW REPORT

To,
The Board of Directors,
Arfin India Limited

We have reviewed the accompanying statement of unaudited financial results of Arfin India Limited for the quarter ended June 30, 2017. This statement is the responsibility of the Company's Management and has been approved by the Board of Directors. Our responsibility is to issue a report on these financial statements based on our review.

We conducted our review in accordance with the Standard on Review Engagement (SRE) 2410, *Engagements to Review of Interim Financial Information performed by the Independent Auditor of the Entity* issued by the Institute of Chartered Accountants of India. This standard requires that we plan and perform the review to obtain moderate assurance as to whether the financial statements are free of material misstatement. A review is limited primarily to inquiries of Company personnel and an analytical procedure applied to financial data and thus provides less assurance than an audit. We have not performed an audit and accordingly, we do not express an audit opinion.

Based on our review conducted as above, nothing has come to our attention that causes us to believe that the accompanying statement of unaudited financial results prepared in accordance with applicable Indian Accounting Standards (Ind AS) specified under Section 133 of the Companies Act, 2013 read with the Companies (Indian Accounting Standards) Rules, 2015 (Ind AS) and other recognized accounting practices and policies has not disclosed the information required to be disclosed in terms of Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 read with Circular No. CIR/CFD/FAC/62/2016 dated July 5, 2016 of SEBI including the manner in which it is to be disclosed, or that it contains any material misstatement.
